

Figure 27. Qualitative data plots of composition and roundness of pebbles in conglomerates of Pennsylvanian and Permian Strathearn Formation at sites 1 to 17, greater Beaver Peak area, Nev. Count numbers and percents are shown in tables 2 and 3. Sample site numbers are keyed to figure 4.

A, Percent of all pebbles that are either quartzarenite or chert at sites 1 to 17; B–D, percent of chert pebbles and percent of quartzarenite pebbles at sites 1–17 that are subangular (B), subrounded (C) or rounded (D). Each category (subangular, subrounded, and rounded) totals 100 percent.
